9767452158

Summary

A Self-motivated and organized professional with over 2 Year of Experience in UI Development. Passionate in keeping myself up-to-date by participating in various Community based discussions for continuous learning.

Experience - 2 years 6 months

Previous organization - Worked as a front end developer at Srijan Technologies (AngularJS, JavaScript, Css)

Working as a front end developer at Promobi Technologies as a Front End Developer (AngularJS, JavaScript, Css, Cordova, ionic).

Projects

1) **Project Description** - TagBoard Prototype for displaying random values of data using Angular as a frontend (<http://sibustephen.github.io/tagboard/>) .

(Tools and Technology used **css,sass**).

My Role - Was responsible to design the whole of the Prototype. Based on the mockup's provided.

2) **Project Description** - Redesigning magazine pages for yearly and monthly subscription.

My Role - Was responsible for redesigning the site based on the Mockup design provided for the same, which included a team of three including one developer, one tester as well.

(Tools and Technology used **jQuery , css,sass**)

3) **Project Description** - AGA KHAN Foundation is a nonprofit organization where in it's distributed among various channels(which provides provision Articles, blogs , new letter, feeds etc.) and is an information providing sites. (www.iis.ac.uk,www.theismaili.org).

My Role - Was responsible for managing the Front end part of the site which included a team of four including tester, two developers where in the tickets needs to be resolved on the basis of the sprint associated for a week or so and is mapped with Jira.

	<p>(Tools and Technology used jQuery , css,sass)</p> <p>4) Project Description - Implemented Highchart server where in a server which generates a chart based on the json values passed to it and the ways of rendering includes two methods.</p> <p>1) The first method includes generating a chart in image format based on the json value passed to the same as such.</p> <p>2) The second method includes devising a phantom js server which makes a call to the server and the callback function gives out a base64 image format, .The json passed embedded chart image which can be used to embed anywhere in sites.</p> <p>- https://github.com/sibStephen/highcharts, -https://highchartsexport.wordpress.com</p> <p>(Tools and Technology used Highcharts, high stock.js, Phantom js).</p> <p>5) Project Description - Sealed Air i s a multinational Packaging company which handles packaging for products which includes food, household products etc.</p> <p>Sealed air (BEST) is an innovative application for all the products this application is basically used for data analytics purposes which uses highcharts for it's data analysis where in the data will be passed as a json format from the data analytics tool and it consists of all the data collected for the analysis part , this data is then passed to the application which filters through the son and generate a highchart as such.</p> <p>My Role - The team consist of 7 including three front end dev's and two backend developers as such. where in the back end is managed with Drupal and front end using Angular s o was responsible for handling the front part using angular (for communicating with the back end for retrieving the json data which is exposed as a rest API) and solving the UI/Ux issues using css/sass</p> <p>- https://github.com/sibStephen/BEST</p> <p>6) Project Description - Insight Heroes is an survey application for analyzing the surveys, and formatting it in graphs. This application is different from other survey applications because it fetches data (The number of surveys) processes it and displays it different formats based on the survey for each. The application was built in MEAN.io</p> <p>My Role - Was responsible to design the UI (Css part) plus handling the api requests from backend using AngularJs.</p> <p>(https://insightheroes.co/home)</p> <p>- https://git.promobitech.com/insight-heroes/ih-web</p>
--	--

	<p>7) Project Description - Tandem Diabetes is a US based national health care organization, so tandem had to build a health care product for their patients, so this application was made in ionic application.</p> <p>My Role - The team consisted of three members (2 front end, 1 tester) i was responsible to coordinate with the marketing lady for tandem who was acting as a project manager for this product and i was responsible for handling the issues and new change requests from client css and js part (Worked as a support for this product). - https://git.promobitech.com/tandem/tandem-diabetes.</p> <p>8) Project Description - T:simulator is a product of tandem diabetes, which was basically focused for those using the actual t:simulator, T:Simulator is basically the diabetes product which is used by the diabetic patient in US so this t:simulator product is the guideline product which also has a replica of the actual t:simulator inside the t:simulator app (Built in java, js). This application is built in cordova(ios, android). -https://www.tandemdiabetes.com/products/t-simulator-demo-app.</p> <p>My Role- Was responsible to manage the layout of each from and structuring the layout of the app according the design mockup provided by the designer, as well as handling the Javascript and css part and ensuring proper build is sent for ios and android both. -https://git.promobitech.com/tandem/slim-jim.</p> <p>9) Project Description – HR portal for employees within the firm which provides, accessibility to apply for leaves, store data of each employees and an overall control to HR to apply for various events, applying terms and policies for each employee etc. Built in express- starter with node js as a back end and ejs on front end and sorting data in postgres sql. This application is serving 50 employees currently and the features (Based on the employees requirement the feature gets implemented). (https://hr.promobitech.com)</p> <p>My Role- The team consisted of 3 my role consisted of handling the api's, and making api's handling the routes along with the front end part as such. (hr.promobitech.com)</p> <p>10) Project Description – Mobliock Pro is a Kiosk mode application used in android devices, to help track location of a device registered.</p> <p>My Role- Was responsible to design the landing pages, for mobilock and discuss with the designers and collaboratively make the designs into implementation (mobilock.in).</p> <p>Skills - Css, Sass, Javascript , JQuery, AngularJs.</p> <p>Tools , libraries - Highchart, PhantomJs, Github, JIRA, Chartjs, Angular material.</p>
